EuroMix

Hydraulic Lime Mortar & Render

Build on our Experience

CPI EuroMix – Lime Mortars & Renders for Today

Lime mortars and renders have been used for hundreds of years, providing a versatile, reliable and aesthetically pleasing method of construction. Although not widely used over the past century, lime mortar and render has enjoyed a steady revival over the past few years, often being specified for the renovation of historic buildings. Now, utilising the latest manufacturing technology, lime mortar and renders are viable construction products for both new building and refurbishment offering a range of benefits including performance, aesthetics and a return to traditional materials.

Versatility and Performance

Lime mortar has a number of advantages over cement based products. Its unique characteristics make it highly flexible enabling buildings to be built without unsightly expansion joints. This also means that it has the dexterity to accommodate slight movements in the building, caused by settlement or thermal shock, without cracking. Once hardened it provides good bond and compressive strength and a uniform appearance. As well as being highly environmentally friendly in manufacture, lime mortars and renders also enable buildings to breathe, helping to create a healthy internal living environment.

Dry Mortar Technology

CPI EuroMix has a proven track record in manufacturing a wide range of high performance factory produced, dry mix construction products. By utilising this experience, CPI EuroMix in conjunction with Lime Technology and Castle Cement can now provide lime mortar and renders as well as renders for spray application in bulk silos as well as 25kg bags. EuroMix hydraulic lime mortars and renders are manufactured under a BSI/NSAI registered ISO 9001 Quality System. Mortars are suitable for brick or block laying as well as stone masonry and other traditional applications. A comprehensive range of coloured hydraulic lime mortars is also available.

Restoration to New Build

By combining the traditional qualities of lime mortar and renders with modern manufacturing and application technology, the products are now ideal for use on new build as well as sensitive renovation projects.
